## Missing Link in Education

Taking a close look at multiple success stories, even before it was scientifically proven, those who were brought up with home education at an infant age, they had leverage to their peers academically, some in later prospects in life. The missing link in any education system globally, is parents.

A fascinating research by Charlotte Alter from Time magazine, noted of parents who raised children who all went on to extraordinary success - "They realized the importance of early-childhood education and taught their children to read and count before they even set foot in a classroom. Some even taught their children to read before they were 2 years old.

## Ladder of learning

Parents should teach their baby the basics before age two so that they can do well in pre-school and school.
